

We are confident.
We are inquisitive.
We are scientists.

Science Vocabulary of the Month

solar system

Our solar system consists of the Sun and everything that orbits it. This includes eight planets and their moons, dwarf planets, and many asteroids, comets, and other small, icy objects.

At the center of the solar system is a star called the Sun. It is the largest object in the solar system. Travelling around this sun are the planets. In order from closest to the Sun, these planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
